

AP PHYSICS 2: LIGHT AND GEOMETRIC OPTICS

Directions: Each of the questions or incomplete statements below is followed by five suggested answers or completions. Select the one that is best in each case and place the letter of your choice in the corresponding box on the student answer sheet.

Note: To simplify calculations, you may use $g = 10 \text{ m/s}^2$ in all problems.

1. Two satellites of equal mass orbit a planet. Satellite B orbits at twice the orbital radius of Satellite A. Which of the following statements is true?
 - (A) The gravitational force on Satellite A is four times less than that on Satellite B.
 - (B) The gravitational force on Satellite A is two times less than that on Satellite B.
 - (C) The gravitational force on the satellites is equal.
 - (D) The gravitational force on Satellite A is two times greater than that on Satellite B.
 - (E) The gravitational force on Satellite A is four times greater than that on Satellite B.
2. A 70-kg astronaut floats at a distance of 10 m from a 50000-kg spacecraft. What is the force of attraction between the astronaut and spacecraft?
 - (A) $2.4 \times 10^{-6} \text{ N}$
 - (B) $2.4 \times 10^{-5} \text{ N}$
 - (C) Zero; there is no gravity in space.
 - (D) $2.4 \times 10^5 \text{ N}$
 - (E) $2.4 \times 10^6 \text{ N}$
3. The centripetal acceleration on 1000 kg car in a turn is $1 \times 10^5 \text{ m/s}^2$. The radius of the turn is 10 m. What is the car's speed?
 - (A) $1 \times 10^1 \text{ m/s}$
 - (B) $1 \times 10^2 \text{ m/s}$
 - (C) $1 \times 10^3 \text{ m/s}$
 - (D) $1 \times 10^4 \text{ m/s}$
 - (E) $1 \times 10^5 \text{ m/s}$
4. A proposed "space elevator" can lift a 1000 kg payload to an orbit of 150 km above the Earth's surface. The radius of the Earth is $6.4 \times 10^6 \text{ m}$, and the Earth's mass is $6.0 \times 10^{24} \text{ kg}$. What is the gravitational potential energy of the payload when it reaches orbit?
 - (A) $1.0 \times 10^3 \text{ J}$
 - (B) $2.7 \times 10^6 \text{ J}$
 - (C) $6.1 \times 10^{10} \text{ J}$
 - (D) $2.7 \times 10^{12} \text{ J}$
 - (E) $1.0 \times 10^{15} \text{ J}$
5. The Earth is at an average distance of 1 AU from the Sun and has an orbital period of 1 year. Jupiter orbits the Sun at approximately 5 AU. About how long is the orbital period of Jupiter?
 - (A) 1 year
 - (B) 2 years
 - (C) 5 years
 - (D) 11 years
 - (E) 125 years
6. A satellite orbits the Earth at a distance of 200 km. If the mass of the Earth is $6.0 \times 10^{24} \text{ kg}$ and the Earth's radius is $6.4 \times 10^6 \text{ m}$, what is the satellite's speed?
 - (A) $1.0 \times 10^3 \text{ m/s}$
 - (B) $3.5 \times 10^3 \text{ m/s}$
 - (C) $7.8 \times 10^3 \text{ m/s}$
 - (D) $5 \times 10^6 \text{ m/s}$
 - (E) $6.1 \times 10^7 \text{ m/s}$

7. Mars orbits the Sun at a distance of 2.3×10^{11} m. The mass of the Sun is 2.0×10^{30} kg, and the mass of Mars is 6.4×10^{23} kg. Approximately what is the gravitational force that the Sun exerts on Mars?
- (A) 1.6×10^{20} N
(B) 1.6×10^{21} N
(C) 3.7×10^{21} N
(D) 3.7×10^{32} N
(E) 3.7×10^{42} N
8. When climbing from sea level to the top of Mount Everest, a hiker changes elevation by 8848 m. By what percentage will the gravitational field of the Earth change during the climb? (The Earth's mass is 6.0×10^{24} kg, and its radius is 6.4×10^6 m.)
- (A) It will increase by approximately 0.3 %.
(B) It will decrease by approximately 0.3 %.
(C) It will increase by approximately 12 %.
(D) It will decrease by approximately 12 %.
(E) The gravitational field strength will not change.
9. Four planets, A through D, orbit the same star. The relative masses and distances from the star for each planet are shown in the table. For example, Planet A has twice the mass of Planet B, and Planet D has three times the orbital radius of Planet A. Which planet has the highest gravitational attraction to the star?
- | Planet | Relative mass | Relative distance |
|--------|---------------|-------------------|
| A | $2m$ | r |
| B | m | $0.1r$ |
| C | $0.5m$ | $2r$ |
| D | $4m$ | $3r$ |
- (A) Planet A
(B) Planet B
(C) Planet C
(D) Planet D
(E) All have the same gravitational attraction to the star.
10. A satellite orbits the Earth at a distance that is four times the radius of the Earth. If the acceleration due to gravity near the surface of the Earth is g , the acceleration of the satellite is most nearly
- (A) zero
(B) $g/2$
(C) $g/4$
(D) $g/8$
(E) $g/16$
11. The mass of a planet is $1/4$ that of Earth and its radius is half of Earth's radius. The acceleration due to gravity on this planet is most nearly
- (A) 2 m/s^2
(B) 4 m/s^2
(C) 5 m/s^2
(D) 10 m/s^2
(E) 20 m/s^2
12. A satellite orbits the Earth in an elliptical orbit, with point A being close to the Earth and point B farther away. As the satellite moves from point A to point B, which of the following is true of the angular momentum and kinetic energy of the satellite?

- | | Angular momentum | Kinetic energy |
|-----|------------------|------------------|
| (a) | Increases | Remains constant |
| (b) | Remains constant | Increases |
| (c) | Decreases | Remains constant |
| (d) | Remains constant | Decreases |
| (e) | Remains constant | Remains constant |

13. Two planets of mass M and $9M$ are in the same solar system. The radius of the planet of mass M is R . In order for the acceleration due to gravity to be the same for each planet, the radius of the planet of mass $9M$ would have to be

(A) $R/2$
 (B) R
 (C) $2R$
 (D) $3R$
 (E) $9R$

14. Two planets, X and Y, orbit a star. Planet X orbits at a radius R , and Planet Y orbits at a radius $3R$. Which of the following best represents the relationship between the acceleration a_X of Planet X and the acceleration a_Y of Planet Y?

(A) $a_X = 9a_Y$
 (B) $9a_X = a_Y$
 (C) $a_X = 3a_Y$
 (D) $3a_X = a_Y$
 (E) $a_X = a_Y$

15. A satellite is in a stable circular orbit around the Earth at a radius R and speed v . At what radius would the satellite travel in a stable orbit with a speed $2v$?

(A) $14R$
 (B) $12R$
 (C) R
 (D) $2R$
 (E) $4R$

16. The Earth and the moon apply a gravitational force to each other. Which of the following statements is true?

(A) The Earth applies a greater force on the moon than the moon exerts on the Earth.
 (B) The Earth applies a smaller force on the moon than the moon exerts on the Earth.
 (C) The Earth applies a force on the moon, but the moon does not exert a force on the Earth.
 (D) The Earth does not apply a force on the moon, but the moon exerts a force on the Earth.
 (E) The force the Earth applies to the moon is equal and opposite to the force the moon applies to the Earth.

17. Two masses exert a gravitational force F on each other. If one of the masses is doubled, and the distance between the masses is tripled, the new force between them is

(A) $6F$
 (B) $2F/3$
 (C) $2F/9$
 (D) $3F/2$
 (E) $4F/9$

18. A planet orbits at a radius R around a star of mass M . The period of orbit of the planet is

(A) $\sqrt{\frac{4\pi^2 R^2}{GM}}$
 (B) $\frac{4\pi^2 R^3}{GM}$
 (C) $\sqrt{\frac{4\pi^2 R^3}{GM}}$
 (D) $\sqrt{\frac{4\pi^2 R}{GM}}$
 (E) $\frac{GM}{4\pi^2 R}$

19. A moon orbits a large planet in an elliptical orbit, with its closest approach at a distance a , and its farthest distance b . The speed of the moon at point b is v . The speed at point a is
- (A) $\frac{av}{b}$
 (B) $\frac{bv}{a}$
 (C) $\frac{(a+b)v}{b}$
 (D) $\frac{(b-a)v}{b}$
 (E) $\frac{2bv}{a}$
20. A satellite orbits the Earth in an elliptical orbit. Which of the following statements is true?
- (A) The angular velocity of the satellite increases as it travels farther from the Earth.
 (B) The acceleration of the satellite increases as it travels closer to the Earth.
 (C) The angular momentum of the satellite increases as it travels closer to the Earth.
 (D) The potential energy of the satellite is equal to its kinetic energy at all points in the orbit.
 (E) The speed of the satellite must remain constant for it to remain in orbit around the Earth.
21. Two moons of mass m and $2m$ orbit a planet of mass M at the same radius R and speed v toward each other, as shown. The moons collide and stick together without destroying either moon. The total momentum of the moons after the collision is
22. The velocity of the two masses after the collision above is
- (A) v counterclockwise
 (B) $v/2$ counterclockwise
 (C) $v/2$ clockwise
 (D) $v/3$ counterclockwise
 (E) $v/3$ clockwise
23. Consider a two-star system shown above, which consists of two stars of mass m rotating in a circle of radius r about their center of mass. What is the total energy of the two-star system?
- (A) $-Gm^2/2r$
 (B) $Gm^2/2r$
 (C) $Gm^2/4r$
 (D) $3Gm^2/4r$
 (E) $-Gm^2/4r$
24. If a planet has twice the radius of Earth and half of Earth's density, what is the acceleration due to gravity on the surface of the planet (in terms of the gravitational acceleration g on the surface of Earth)?
- (A) $4g$
 (B) $2g$
 (C) g
 (D) $g/2$
 (E) $g/4$

- (A) mv
 (B) $2mv$
 (C) $3mv$
 (D) $6mv$
 (E) zero

AP PHYSICS 2: LIGHT AND GEOMETRIC OPTICS**SECTION II****5 Questions**

Directions: Answer all questions. The parts within a question may not have equal weight. All final numerical answers should include appropriate units. Credit depends on the quality of your solutions and explanations, so you should show your work. Credit also depends on demonstrating that you know which physical principles would be appropriate to apply in a particular situation. Therefore, you should clearly indicate which part of a question your work is for. 10

1. In an experiment a beam of red light of wavelength 675 nm in air passes from glass into air, as shown above. The incident and refracted angles are θ_1 and θ_2 , respectively. In the experiment, angle θ_2 is measured for various angles of incidence θ_1 , and the sines of the angles are used to obtain the line shown in the following graph.

- (a) Assuming an index of refraction of 1.00 for air, use the graph to determine a value for the index of refraction of the glass for the red light. Explain how you obtained this value.

- (b) For this red light, determine the following.
- The frequency in air
 - The speed in glass
 - The wavelength in glass
- (c) The index of refraction of this glass is 1.66 for violet light, which has wavelength 425 nm in air.
- Given the same incident angle θ_1 , show on the ray diagram on the previous page how the refracted ray for the violet light would vary from the refracted ray already drawn for the red light.
 - Sketch the graph of $\sin \theta_2$ versus $\sin \theta_1$ for the violet light on the figure on the previous page that shows the same graph already drawn for the red light.
- (d) Determine the critical angle of incidence θ_c for the violet light in the glass in order for total internal reflection to occur.
2. Your teacher gives you a slide with two closely spaced slits on it. She also gives you a laser with a wavelength $\lambda = 632 \text{ nm}$. The laboratory task that you are assigned asks you to determine the spacing between the slits. These slits are so close together that you cannot measure their spacing with a typical measuring device.
- (a) From the list below, select the additional equipment you will need to do your experiment by checking the line next to each item.
- | | |
|--|---------------------------------------|
| <input type="checkbox"/> Meterstick | <input type="checkbox"/> Large screen |
| <input type="checkbox"/> Ruler | <input type="checkbox"/> Paper |
| <input type="checkbox"/> Tape measure | <input type="checkbox"/> Slide holder |
| <input type="checkbox"/> Light-intensity meter | <input type="checkbox"/> Stopwatch |
- (b) Draw a labeled diagram of the experimental setup that you would use. On the diagram, use symbols to identify carefully what measurements you will need to make.

- (c) On the axes below, sketch a graph of intensity versus position that would be produced by your setup, assuming that the slits are very narrow compared to their separation.

Air	$n_{air} = 1.00$
Oil	$n_{oil} = 1.52$
Plate	n_{plate}

Note: Figure not drawn to scale.

3. A thin layer of transparent oil is placed on top of a transparent plate. The oil film is then illuminated by white light shining onto the oil's surface, as shown in the figure above. To an observer standing right next to the light source and looking straight down on the oil film, the oil film appears green, corresponding to a wavelength of 520 nm in air. The oil has an index of refraction of 1.52.
- (a) Determine the frequency of the green light in the air.
- (b) Determine the frequency of the green light in the oil film.
- (c) Calculate the wavelength of the green light in the oil film.
- (d) The oil film thickness is half of the wavelength you found in part (c). Is the index of refraction of the plate greater than, less than, or equal to that of the oil?

____ Greater than ____ Less than ____ Equal to

Justify your answer.

Note: Figure not drawn to scale.

- (e) As the observer starts moving to the right away from the light source, as shown in the figures above, the film appears to change color. Describe the color change and give an explanation for this phenomenon.
